

Faster Deployment Times - Meet FDLE Specs

MardiGras Racetrack & Gaming Center Deploys 500+ Cameras For Slot Expansion

500+ CAMERAS, 75+ TERABYTES, 4SIF @ 30FPS - NO PROBLEM!

When MardiGras Racetrack & Gaming Center needed a cost effective and network friendly solution that could meet and exceed every state regulation in the country, they turned to Aware Digital and IndigoVision. Mardi Gras needed an expandable system for an unknown number of cameras. All cameras had to meet FDLE requirements of 4SIF resolution, at 30 Frames per second with over 30 days of storage for every channel. These requirements were met with the industry leading technology provided by Aware Digital and IndigoVision.

MODULAR SYSTEM ARCHITECTURE, GROWTH ON-DEMAND

Without deploying a single DVR or having any single point of failure, MardiGras has successfully implemented one of the largest facilities based IP video networks in the world. The Aware Digital and IndigoVision solution uses modular video encoders, storage units and network elements, with unmatched flexibility and reliability. With this system cameras, storage or viewing stations can be expanded at any time. Operators can securely access live or recorded video from any workstation on demand. There is no need to maintain and support hundreds of DVR's, tapes or separate systems. MardiGras's surveillance team is now confident in its ability to grow their system adding capacity as needed in the future.

(IndigoVision 10 Channel Hot-Swap Encoder Rack)

FEATURES:

- ▶ No DVRs!
- ▶ Unlimited Number of Cameras
- ▶ Meets FDLE Specs
- ▶ Market Leading Video Quality
- ▶ No Single Point of Failure
- ▶ Unlimited Storage Per Camera
- ▶ Increase Storage On Demand
- ▶ Operator Audit Database
- ▶ Directly Integrates Access Control
- ▶ Supports Monitors & Video Walls
